

Patent claims

- 1 1. An adhesive system (1)
 - 2 - with a structural component (3), particularly a
 - 3 glass panel, to be mounted to a base structure
 - 4 (2),
 - 5 - with a primary bonding (5), which, at a first
 - 6 bonding location (6), is applicable onto the
 - 7 structural component (3) to be mounted, and
 - 8 has an adhesive of great strength,
 - 9 - with a secondary bonding (7), which, at a
 - 10 second bonding location (8), is applicable onto
 - 11 the structural component (3), and has an
 - 12 elastically stretchable adhesive.
- 1 2. An adhesive system according to claim 1,
- 2 characterized in that a mounting profile (4) fixable at the
- 3 base structure (2) can be fastened at the structural
- 4 component (3).
- 1 3. An adhesive system according to claim 1 or 2,
- 2 characterized in that a carriage (9) can be placed between
- 3 the mounting profile (4) and the structural component (3).
- 1 4. An adhesive system according to claim 2 or 3,
- 2 characterized in that an application adapter (10), which has

3 a first mating surface (11) for the primary bonding (5), can
4 be placed between the carriage (9) and the structural
5 component (3).

1 5. An adhesive system according to claim 3 or 4,
2 characterized in that the secondary bonding (7) cooperates
3 with a second mating surface (12), which is disposed at the
4 carriage (9).

1 6. An adhesive system according to one of the
2 claims 3 to 5, characterized in that the carriage (9)
3 comprises a roller assembly (15) and a base body (13),
4 which has a reception (14) and an application adapter (10).

1 7. An adhesive system according to claim 6,
2 characterized in that the base body (13) has a mating
3 surface (12).

1 8. An adhesive system according to one of the
2 claims 1 to 7, characterized in that the secondary bonding
3 (7) has two bonding areas (7A, 7B) which enclose the
4 primary bonding (5).
